### Description

Contains antibacterial for a deep and safe hand cleaning wherever you are. It is used without water and acts quickly. The sanitizing gel can be used at any time and in any place without needing water, when, for example, you are in contact with the sick; away from home, whenever you are in contact with objects manipulated by others, for example on public transport, in the hospital, in the bathrooms; on a daily basis, when touching money, telephones or shopping. The product is also particularly suitable for healthcare professionals, such as doctors and paramedics etc.

### How to use

Pour a small amount of gel on the hands and rub until completely absorbed. The sensation of stickiness caused by glycerin will disappear in a few seconds. Repeat several times within a day.

### Composition - Ingredients:

The chemical composition of the gel includes sodium hypochlorite, a product used above all in dermatology and hospital surgery and in dentistry to disinfect the patient's canals. Sodium hypochlorite, together with the multiple therapeutic effects, is more commonly known as an antibactericide. In addition, the formula is rich in substances with emollient and dermo-protective properties, such as the highest quality glycerin, capable of greatly attenuating the dryness of the skin. In fact, one of the major problems given by the repeated applications of alcoholic solutions, which are commonly found on the market, is dehydration of the skin. In this formulation, the high percentage of glycerin is very effective in humidifying the skin, protecting it against mechanical and chemical irritation and keeping it perfectly hydrated and soft.

## Hand sanitizing gel with antibacterial 250 ml

Ottimo profumo e texture per igienizzare le mani!

Ho provato questo prodotto e sono molto soddisfatta. Lascia le mani mordide e profumate e dato che è presente il cloro non ne si sente l'odore.

Ne basta una piccola quantità. Inizialmente le mani appaiono appiccicaticce ma la sensazione scompare dopo pochi secondi
